

# The Learning Centre

Learner Centre is a dynamic online learning platform designed to open up broader education options in South Africa. It is a comprehensive, fast, efficient, and effective education solution that combines excellent information management with the best technology

Learner centre provides a virtual class environment where learners receive lessons from a qualified tutor in an interactive environment. Learners have direct and immediate access to their instructor for instant feedback and direction.

Learner centre uses a learner-centred teaching method that uses online learning resources to facilitate information sharing outside the constraints of time and place among a network of people. Subsequent discussions of problems, solving exercises, case studies, review questions, etc. help the Learners to understand better what they learned before.

Communication on Learner centre is accomplished through electronic media such as video conferencing, transmitting voice and text messages, green board sharing as well as chats between connected users.

Learner centre provides a structured schedule of lessons. Lessons are typically scheduled by tutors at their convenience. Learners are at liberty to select lessons to join from a wide range of scheduled lessons, this flexibility provided by learner centre will help improve learner enthusiasm and participation and generally yield higher retention.

Learner centre also provides a recording feature which allows for instant playback of any recorded lesson, this can be extremely useful for learners to review material and concepts for an upcoming assessment or exam. It also gives parents the ability to monitor the lessons to ensure that they are satisfied with the education their child is receiving.
